EDUCATION

Dokuz Eylül University
B.Sc. Computer Engineering, 3rd Year

Hasan Türek Anatolian High School
Graduated 2nd in class, 2022

TECHNICAL SKILLS

Languages: Python, Java, C, C#, SQL, JavaScript, TypeScript, HTML, CSS
Mobile & Cloud: React Native, Expo, Firebase Realtime Database, EAS Build
Back End: Spring Boot, .NET, ASP.NET MVC, Entity Framework, REST APIs
Data & ML: TensorFlow, Scikit-learn, data preprocessing, model evaluation
Databases: PostgreSQL, MySQL, MSSQL, database design
Tools: Docker, Git, layered architecture, CRUD workflows

LANGUAGES

English - Advanced
German - A2-B1

INTERNATIONAL EXPERIENCE

Erasmus+ Exchange Program, Poland
Participated in a high-school exchange program, gaining early international and cross-cultural experience.

PROFESSIONAL SUMMARY

Third-year Computer Engineering student with practical experience in web development, database-backed applications, machine learning fundamentals, embedded AI projects, and mobile application development. Builds academic and personal software projects with a disciplined, research-oriented approach, translating theory into working applications across back-end, front-end, data, mobile, and deployment workflows.

WORK EXPERIENCE

Software Development Intern

Niso Software Technologies Limited Company | 25 days, 2025

- Supported software development tasks in a professional engineering environment.
- Strengthened practical understanding of application structure, implementation workflows, and collaborative development habits.
- Applied academic programming knowledge to real-world software maintenance and feature-development contexts.

PROJECTS

BloomBook - Book Recommendation Platform

Spring Boot, PostgreSQL, Python, Docker, REST API

- Developed a full-stack book recommendation application with a Spring Boot back end, PostgreSQL persistence, and a Python recommendation service.
- Containerized the database, recommender service, and web application with Docker Compose for a reproducible local environment.

Dort Bagla Mobile - Connect Four Game

React Native, Expo, TypeScript, Firebase Realtime Database, EAS Build

- Built a mobile Connect Four game with local play, online room creation, in-room messaging, and an offline AI opponent mode.
- Integrated Firebase Realtime Database for synchronized online gameplay and configured Android APK builds for internal distribution.

STM32-Based Command Recognition Application

Embedded Systems, Machine Learning, STM32

- Built a machine learning-based command recognition system designed to run on an STM32 microcontroller.
- Combined signal/data processing concepts with embedded deployment constraints to create a practical AI application.

Web-Based Software Projects

Spring Boot, .NET, Databases, HTML, CSS, JavaScript

- Developed layered web applications including CRUD operations, database integration, and basic user interfaces.
- Practiced back-end and front-end fundamentals through structured academic and individual projects.

C, XML and XSD Integration Project

C, XML, XSD

- Created and processed XML data files using C.
- Implemented schema-based validation with XSD to improve data consistency and reliability.

Java Console Games and Data Structures Projects

Java, Algorithms, Data Structures

- Developed console-based games and data structure applications to strengthen object-oriented programming and algorithmic problem-solving skills.
